**AEROSEAL RELOCATES TO CENTERVILLE, BRINGING GREEN  
TECHNOLOGY JOBS TO DAYTON AREA**

**Company Expects To Create 40 Or More Local Jobs As Its Breakthrough Duct Sealing  
Technology Captures Piece of the Sustainability Business Market**

CENTERVILLE, OH – November 21, 2011 – It's now official. After several months of speculation, Aero seal LLC has officially opened its headquarters in Centerville, bringing with it the promise of dozens of new jobs within the green technology field. With exclusive licensing rights to a breakthrough air duct sealing technology developed with funding in part from the U.S. Department of Energy, the company expects to play a leading role in the U.S. sustainability business market which is expected to reach \$60 billion by 2013.

Since closing the lease on a 15,000 square-foot office and manufacturing facility in downtown Centerville last month, Aero seal has hired half a dozen new employees. Immediate openings still remain for administrative, technical and sales positions. The company expects to create over forty new jobs in the Dayton area over the next several years.

(more)

“We’re excited to be a new member of the Dayton-area business community,” said Aero seal president, Amit Gupta. “Centerville offers both the professional support and life-style that is ideal for a growing company like Aero seal. Our technology is on the forefront of an industry that represents the future of America and we can’t think of a better place to grow.”

Aero seal, a division of JMD Corporation, focuses exclusively on the development and promotion of Aero seal air duct sealing technology. Developed at Lawrence Berkeley National Laboratory, Aero seal has proven to be a breakthrough air duct sealing solution that is 95% effective at sealing air duct leaks – a problem that plagues 60% to 85% of residential homes and costs the U.S. \$25 billion in lost energy each year. Aero seal technology was recently awarded Best New Home Technology by [This Old House](#) magazine and is currently featured on the [website](#) for the U.S. Department of Energy.

Aero seal acquired the exclusive rights to the aero seal technology earlier this year and has since launched a national campaign to expand its regional dealerships and service providers in order to make Aero seal services available to homeowners throughout the U.S.
